

ESET Security Software Development Kit

With more than 20 years of experience in the computer security industry, ESET has become a technology leader by pioneering proactive malware detection. Dedicated to providing the highest level of protection, ESET's antivirus and antispymware scanning engine protects from a host of computer threats. These include viruses, Trojans, worms, rootkits, adware, spyware and riskware.

Designed to assist ESET partners, ESET Security Software Development Kit (ESET Security SDK) is a set of tools and utilities for integrating ESET's engine with third-party products and solutions. The flexible architecture and advanced functionality of

ESET Security SDK is suitable for a wide range of implementation scenarios. This enables ESET partners to include computer security service as an added value to their programs or services, providing comprehensive antivirus and antispymware protection to their customers. Some of the many application areas offered by ESET Security SDK include:

- Integration with desktop and server applications
- Integration with mail servers
- Integration with web-based services
- ISP services

KEY FEATURES AT A GLANCE:

- Support for Linux and Windows
- Support for a number of formats (including a wide range of archives)
- Heuristics and Advanced Heuristics
- Enhanced malware cleaning
- Quarantine
- Dynamic update feature
- In-depth logging

KEY BENEFITS

Unique Technology	The award-winning ThreatSense® technology embedded in the scanning core, delivers highly sophisticated proactive protection and improved cleaning. It deploys advanced heuristic algorithms for precise malware identification, without the unnecessary drag on the system resources.
Superior Detection Capabilities	Business clients can rely on the established track record of performance and reliability synonymous with ESET solutions as recognized by independent testing organizations, such as the VB100% and AV-Comparatives. ESET leads the industry in the overall number of VB100% awards, having received its first one in 1998. The prestigious AV-Comparatives tests regularly rank ESET solutions in the highest, Advanced+ category for overall performance and detection capabilities, with low false positives.
Partner Support Services	ESET professionals will assist you with pre-sales and post-sales support. To help you meet the criteria for ESET compatibility, our specialists will guide you throughout the testing period. Additionally, our clients can take advantage of supplemental service to assure seamless implementation of ESET Security SDK specific to their environment. The service includes a specialized on-the-premises training highlighting the solution's capabilities and configuration options to achieve the highest possible level of performance.
Detailed Documentation	ESET partners will gain access to manuals, datasheets, white papers and other technical information. Since the development process is never finished, all partners will be provided with the most up-to-date knowledge-base entries related to ESET Security SDK including the most recent guidelines and hints.
